 - 9.4 SOCIAL VOTING: READ-ONLY USERS CAN NOW VOTE 13
- 10 CHANGE LOG..... 14**

1 I Want To...

Intranets are only valuable if they make it easy for users to get what they need, to answer a question or to complete a task.

So what are the main reasons for employees to use the intranet?

- Looking for a specific piece of information
- Completing a specific task

Many intranets are organized by department, with each department's section of the site housing the content for which it is responsible. But organizing information this way requires that users know which department is responsible for a piece of information in order to locate that content.

Furthermore, users have to understand the structure of the organization to find information that's organized by departments. The biggest problem with an organizational structure is anyone who needs the information needs to know who is responsible for it. But users don't want to have to understand how that particular part of the organization was organized. They just want to complete a task as quickly as possible.

What's wrong with the common hierarchical structure?

Nothing so far, because people tend to think in terms of hierarchies. But be aware of some constraints with hierarchical navigation:

- Some content organized in categories tends to overlap with other categories because it will fit in more than one place
- Content is organized by contributors or owners rather than by users
- Organizational changes means reorganizing the categories to rationalize duplicative content
- Employees who work cross-functionally across departments may have a hard time accomplishing their tasks
- Matrix-managed organizations will find categories too inflexible

If content is only available in departmentally organized categories, it's organized in silos.

A better, user-centric approach is to add task-based navigation to the Intranet. Task-based navigation enables users to complete tasks more effectively. It can dramatically improve employee productivity through:

- Sharing of best practices across an organization, instead of being hidden in silos,
- Less time spent contacting the internal service desk or employees for the answers to common questions,
- Greater consistency in completing tasks,
- Tasks more likely to be completed without errors, and
- Tasks completed more quickly.

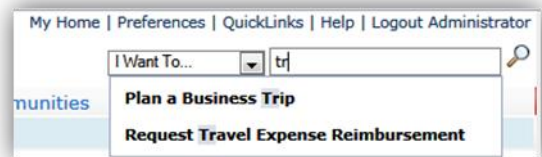

IntelliEnterprise now opens a new dimension to your intranet: task-based navigation.

All customers can keep their organized category structure. Simply add task-based navigation for a much better user experience.

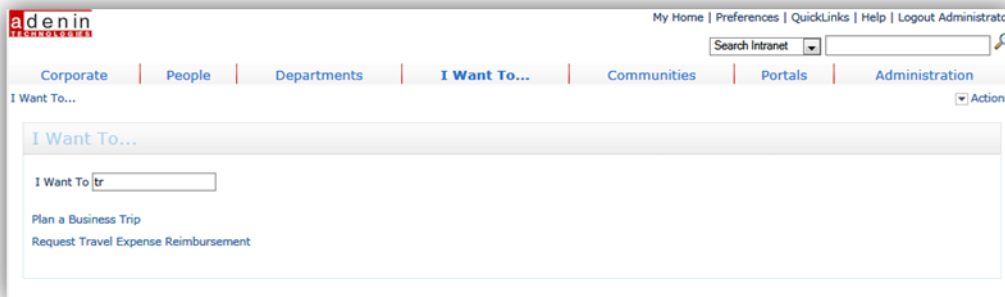

A task-based navigation is like an anti-structure. There's no master structure like a hierarchy – content is just joined together via new bidirectional links (see next chapter for details). These links are also called contextual links, which means that they are creating meaningful relationships between different information.

With contextual navigation users will see all relevant information - documents, procedures or policies, people, applications, workflows - related to a task on a single page.

IntelliEnterprise 11 allows users quickly locate a specific task on the Intranet with the new "I Want To..." option in global search:

A new "I Want To..." portlet allows users to add the list of user-specific tasks to any page:

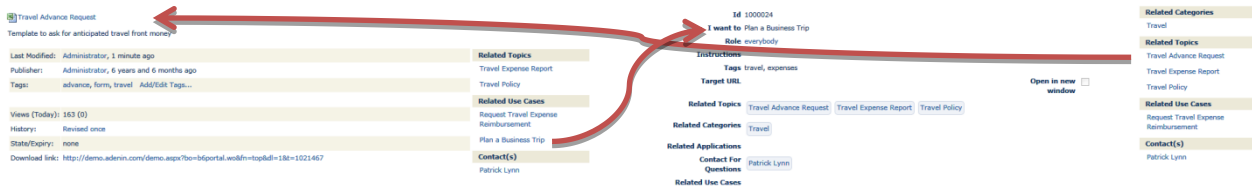

This portlet provides search with instant feedback – so a user can quickly find a specific task by just typing a term or keyword. All tasks shown are also security-trimmed, ensuring that users will only see the tasks relevant for their role.

2 Context Linking

Scattered and isolated information is one of the biggest obstacles for Intranet usability and acceptance. In the past, only HTML pages allowed linking to other information. But most information is published as files or resides in applications and databases. For these information types linking to related information was not possible.

In prior IntelliEnterprise versions a user who found the "Travel Expense Request" form was more or less stuck on a data island, as no further related or contextual information was available.

Version 11 now allows users to link any information from any information (such as linking to a file topic from a record stored in a database):

This new contextual linking helps users completely avoid data islands – and greatly improves both the usability and the acceptance of any Intranet.

The contextual links can be defined as bidirectional. So if the "Travel Advance Request" is linked with "Plan a Business Trip" then "Plan a Business Trip" is also automatically linked back to "Travel Advance Request."

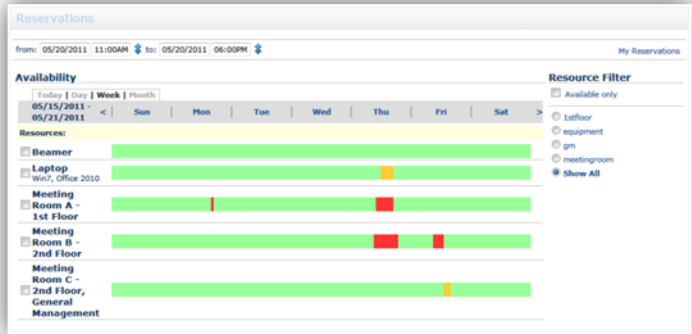

Compared with the regular HTML links the new context links provide three powerful additional features:

1. Security trimming: ensures that a user won't see a related record if he doesn't have the permission to view the record.
2. Location independence: if an item is moved to a new location (e.g. a topic is moved from News to News Archive) the context links are automatically updated to point to the new location.
3. Link vitality: if any item is deleted all context links pointing to the item will also be deleted. This ensures the context links can never point to a page which doesn't exist.

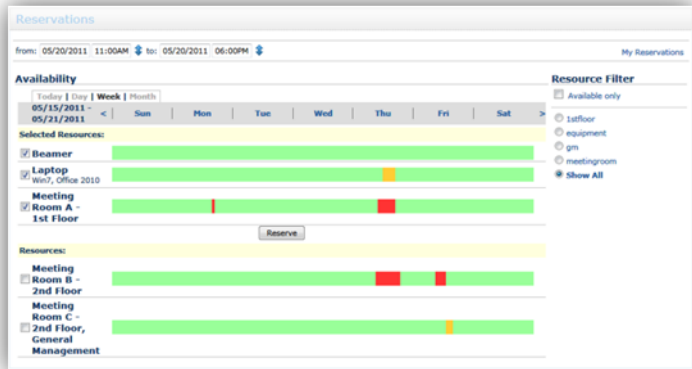

3 Reservation System

The new reservation system allows users to book shared resources like meeting rooms, laptop or cars.

On the start page of the reservation system the user can quickly see the availability of all resources he is allowed to book:

A single reservation can include multiple resources, like a meeting room with projector and laptop:

New Reservation

Requestor: []

Start: 5/20/2011 11:00 AM

End: 5/20/2011 6:00 PM

Capfloor: Sales Meeting

Description: []

Beamer []

Laptop []

WiFi access required:

Meeting Room A - 1st Floor

Coffee: for 6

Tea: for 2

Sandwiches: 5 regular, 3 veggie

Cancel Save

For each resource additional information can be requested (e.g. an order for tea and coffee can be added to the reservation). A basic workflow will automatically forward this information to the right people.

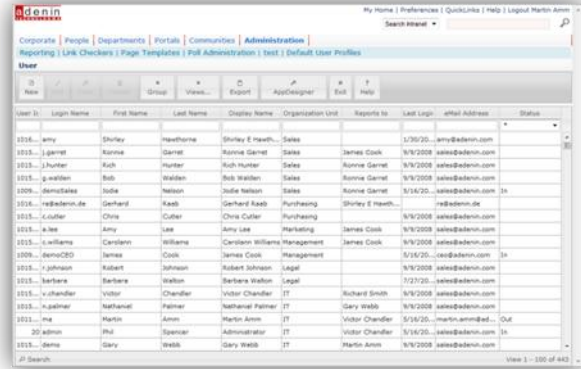

4 Application Builder

4.1 New Grid

The new grid provides the following benefits:

Performance

The new grid is at least twice as fast as the old one. The load time of the old grid increased with the total number of rows in the application. The new grid is optimized for a large number of rows. For applications with a large number of rows the performance is now up to 4,600%(!!) better:

	Old Grid	Version 11	Performance Increase
2,000 Records			
Application Start	1,400 ms	700 ms	100 %
Sort	260 ms	80 ms	225 %
Filter	160 ms	80 ms	100 %
Paging	260 ms	90 ms	189 %
25,000 Records			
Application Start	6,200 ms	820 ms	656 %
Sort	4,600 ms	180 ms	2,456 %
Filter	360 ms	120 ms	200 %
Paging	4,600 ms	100 ms	4,600 %

Supported Browsers

The new grid now provides the same look and feel with the following browsers: Firefox 2.0+, Internet Explorer 6+, Safari 3+, Opera 10.6+ and Chrome 8+.

State Persistence

The old grid lost all settings when a record was opened. So if records had been filtered, the filter settings were lost and needed to be entered again when the record was closed. The new grid now remembers which records were selected as well as all filter and sort settings. So if the record is closed the grid remains in exactly the same state as before.

Dynamic Sizing

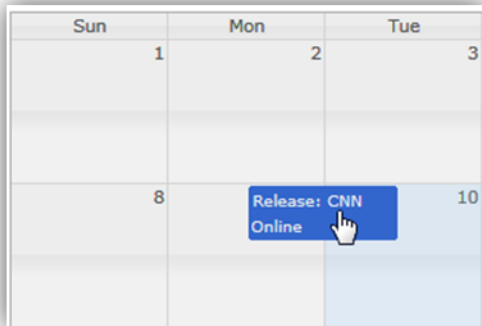

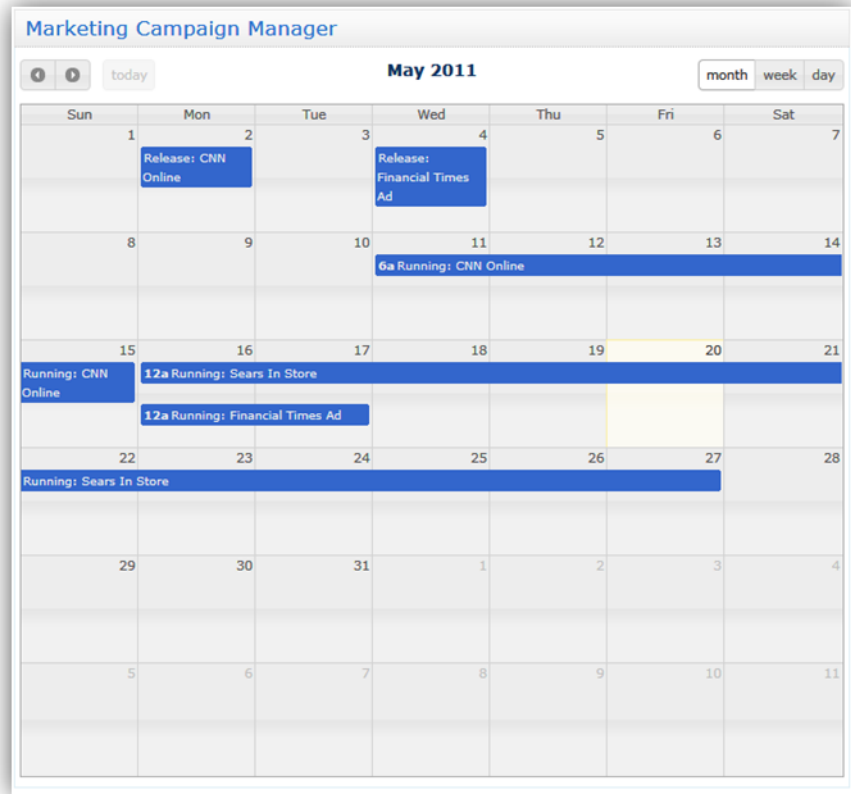

The new grid now automatically uses all available screen space to show as many records as possible. The old grid always used a fixed size, showing just 16 records at a time.

4.2 Calendar Views

The new view type "Calendar View" allows users to display records on a calendar.

This feature makes it easier to build planning and scheduling applications with the Application Builder.

The Calendar View can visualize both items on a specific date as well as time frames (from – to date).

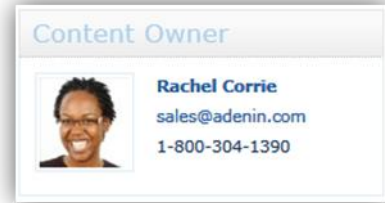

Items can easily be rescheduled directly in the view by just dragging them to a new date.

5 Content Inventory

All Intranets change over time and develop outdated areas and orphaned categories. The Content Inventory is a new tool that helps to discover these areas.

5.1 Category Contact

It is now possible to assign a user contact to each category. This user is the "content owner" and the primary contact for all inquiries and feedback related to the content. A new portlet shows the content owner on each page or selected pages, helping users to quickly identify and contact the right person.

5.2 Last Access Date

We now save the last access date for each category. This new feature allows users to quickly identify areas which are not accessed any longer.

5.3 Last Publish Date

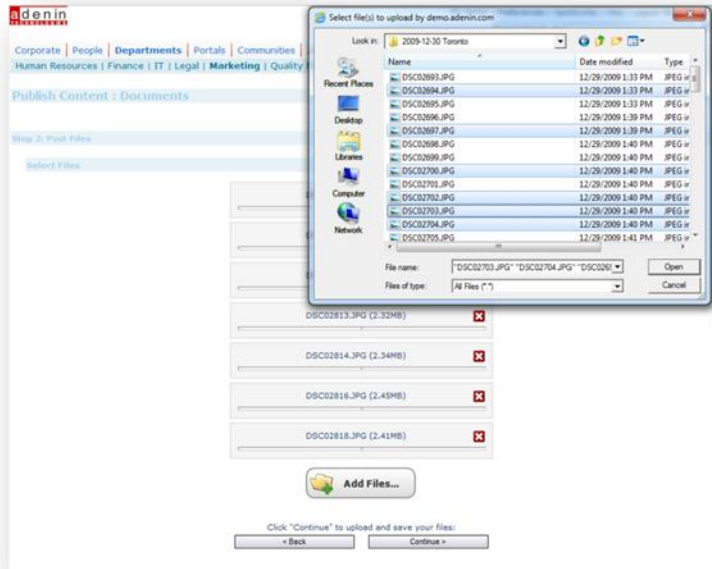

The last publish date shows when something was published or updated. This information helps find areas which require additional attention.

Categories - Not accessed within the last 30 days					
Cat_ID	Caption	Last Access	Last Update	Contact	Page Name
1004388	Reporting	4/6/2011	5/19/2011	Rachel Corrie	
1005758	User Tips & Trips	4/4/2011	5/16/2011		c1005758
1005757	Tips & Tricks	4/1/2011	5/16/2011		c1005757
1025110	Page Templates	3/29/2011	5/16/2011		c1025110
1025112	Community Area	3/29/2011	5/16/2011		c1025112
1005789	Annual Meeting Planning		5/16/2011		

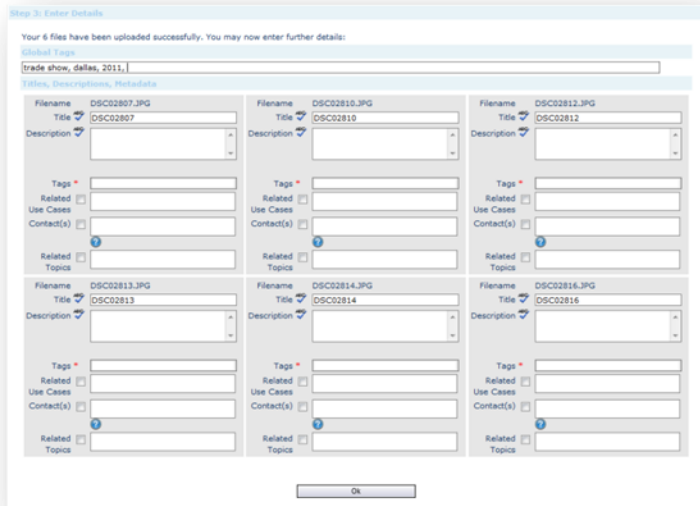

6 Multiple file publishing

The new publishing feature allows users to publish and tag multiple files at once. This is especially helpful if a number of similar files need to be published, e.g. if a number of pictures from the last trade show are published, the same tags can now be applied to all pictures at the same time. Additional tags can also be added for each file.

Select multiple for uploading/publishing:

After uploading all files tags can be applied globally to all files as well as for each individual file:

7 In/Out Board

The new In/Out Board provides a quick view of who is currently in the office.

Users leaving the office can sign out and leave information about where they can be reached and/or when they can be expected back in the office:

Employee Directory - In/Out Board				
Display Name ↕	Status	Out Until	Status Comment	Status Date
	*			
Administrator	In			12/7/2010
James Cook	Out		On vacation until 5/30	5/18/2011
Joane Peters	In			4/21/2011
Jodie Nelson	Out		Sales Training in Houston	5/18/2011
Martin Amm	In			5/18/2011

A new portlet allows users to easily update their In/Out status:

In/Out Status

Status: in the office

Return time (Optional):
1 : 00 PM

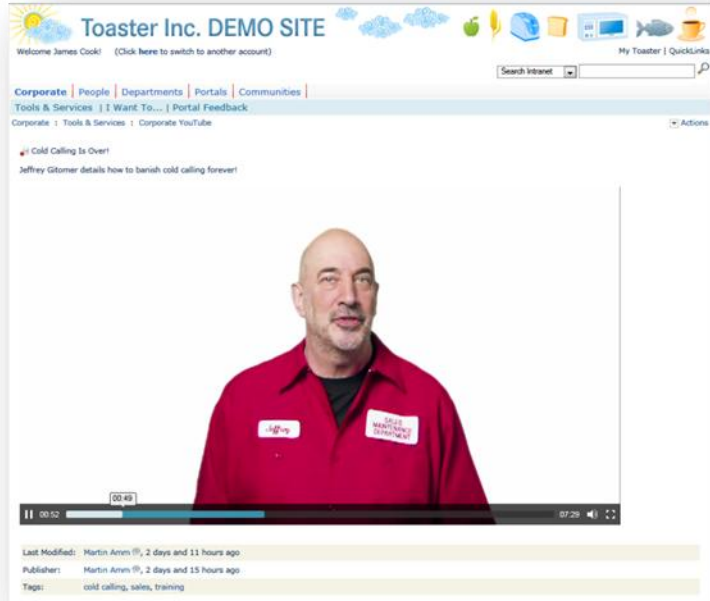

Notes (Optional):

out for lunch

8 New Media Players

Over the course of the last two years video and audio content has gained more and more popularity. Older versions of IntelliEnterprise supported only Flash Video (.flv) and MP3 audio (.mp3) files.

Version 11 now supports a wide variety of video formats (.wmv, .flv, .mov, .mp4, .mp3, .wav) for all major browsers. IntelliEnterprise provides a HTML5 player for modern browsers as well as Flash and Silverlight players for older browsers.

Browser and Device support

	 IE9	 IE6-8	 Firefox	 Opera	 Safari	 Chrome
h.264, MP4	HTML5				HTML5	
WebM only	HTML5		HTML5	HTML5		HTML5
WebM + h.264	HTML5		HTML5	HTML5	HTML5	HTML5
WMV	HTML5					
FLV						
MP3	HTML5				HTML5	HTML5

9 Miscellaneous

9.1 Mail Security Extensions (“GMail Support”)

IntelliEnterprise now fully supports SSL2, SSL3 and TLS protocols when communicating with secure SMTP, POP3 and IMAP servers. Both dedicated SSL port and STARTTLS over regular port modes are supported. These new features now make it possible to use GMail/Google Apps for Business for hosted email processing.

9.2 Search Leading & Trailing Wildcard

In prior version it was only possible to search with a trailing wildcard, e.g. polic* will find both policy and police. Version 11 now also allows a leading wildcard in the search term, e.g. *icy will find policy and spicy.

9.3 Activity Streams: User-to-user messages

Users can now leave messages on the profile page / wall of any other user.

9.4 Social Voting: Read-only users can now vote

Now Read-only Users are also allowed to post new items on the social voting portlet. This allows users to extend the reach of the social feedback features to those with just a basic license.

10 Change Log

Type	Change	Build	Changeld
New Feature	Application Builder Calendar View	439	1001867
New Feature	Application Builder Grid	459	1002015
	Implemented a new jQuery-based grid control for Application Builder tables and views.		
New Feature	Category Contact: new portlet to show user contact information per category.	459	1002115
New Feature	Extended Multimedia Support	455	1002028
New Feature	New portlet: Sign In/Sign Out	448	1001963
New Feature	New publishing process: publish and tag multiple files at the same time.	455	1001751
	Activate with App.Property ("Directory", "PublishBO") = atPublish.wo		
New Feature	Reservation Management	443	1001767
	Reservation system for calendar resources.		
New Feature	Task Based Navigation	460	1002079
Enhancement	Activities portlet: it is now possible to filter the activities by Event Types.	437	1001804
Enhancement	Allow Org Unit access for read-only users.	437	1001830
	Changed the default permissions for the Org Unit application to allow access for read-only users.		
Enhancement	Allow wildcard prefix and postfix.	439	1001823
	Fixed a bug which caused problems when a search term had a wildcard (*) both at the beginning and at the end.		
Enhancement	Anniversaries Portlet: new option "Show Anniversary Date (yes/no)"	449	1001971
Enhancement	Anniversaries portlet: new sort options: by date, by longevity.	439	1001864
Enhancement	App Builder: Sort views by name.	446	1001966
	Dropdown lists on Application Builder pages (e.g. Views) are now sorted in alphabetical order.		
Enhancement	AppBuilder/Topic Properties: Replaced FCKEditor with CKEditor to solve a security issue of FCKEditor and to provide a refreshed UI.	460	1002122
Enhancement	AppBuilder: additional merge codes for database reference fields allow users to merge the caption of a referenced record (and not just the record id). Also works for dropdown and radio fields.	437	1001800
Enhancement	AppBuilder: Comment Field	439	1001814
Enhancement	Application Builder Calendar Pickers	442	1001907
	Redesigned date picker popups for Application Builder date fields.		

Enhancement	Application Builder: added a new FieldEditMode option "Read Only / Admin Input" allowing global administrators to adjust a field which is read-only to regular users.	455	1002062
Enhancement	Application Builder: possibility of adding additional filters to the Web Combo depending on the current user and user's selection in the web form.	455	1002001
Enhancement	Application builder: spell-check for text fields attached.	456	1001994
Enhancement	Application Builder: Taking User Time Zone Information into consideration (Application Property AppBuilder UseUTC = 0 1)	452	1001532
Enhancement	ApplicationBuilder WorkflowTasks: it is now possible to edit task details directly in the workflow form by set the new ApplicationProperty("Workflow", "dmTasksDetailsEditable")=1 ApplicationProperty("Workflow"," dmTasksDetailsEditable")	455	1002041
Enhancement	Awards portlet: 1. It is now possible to filter all awards by AwardType. 2. It is now possible to show last awards without award grouping.	439	1001863
Enhancement	Blog portlet: show Topic Caption as link to Topic Properties Page when portlet option "Show Html topics content" = No.	437	1001803
Enhancement	Calendar portlet: it is now possible to select N months/weeks also for "month/week only" view.	439	1001868
Enhancement	Calendar Portlet: User and custom fields Added options to display the originating user and custom resource fields. Set an Application Property Calendar.ShowUser = 1 to show the user; set Calendar.ShowCustomFields = 1 to show custom fields.	459	1002083
Enhancement	Calendar View Filters	447	1001965
Enhancement	Calendar: Custom colors for custom events	446	1001887
Enhancement	Category Management: new field "MaxTopicVersions" allows users to limit the number of topic versions in the category (0 - unlimited)	455	1001477
Enhancement	Communities: It is now possible to use "linked" template pages for communities.	460	1002095
Enhancement	Community Management mails: it is now possible to change the "subject" of mails by set AppProperty ("CommunityMails", "Subject")	439	1001848
Enhancement	Configurable Cache Control The caching behavior (Cache-Control and related HTTP headers) can now be customized for portal pages. Create an Application Property Global.CacheControl; supported values are "private", "no-cache" or "no-cache, no-store".	441	1001896
Enhancement	CSS: added default line-height to improve the visual appearance of the OOTB styles	460	1002129
Enhancement	Custom IM Libraries Added an option to integrate third-party instant messaging components (e.g. MS Lync). An Application Property "Collab.CustomImJs" may contain a comma-separated list of custom Javascript libraries. When set, the adenin Instant Messenger is disabled.	459	1002084

Enhancement	Daily Digest: it is now possible for Administrators to select from all Roles (not only with the manager membership).	455	1002057
Enhancement	Dashboards: allowing portlets to be automatically refreshed depending on the "AutoRefresh" property in the portlet property page.	459	1002091
Enhancement	Dashboards: Can use a new variable \$CurUser in SQL Statements when defining a data source which will be automatically replaced with the id of the current user.	439	1001842
Enhancement	Discussion Forum Improvements: Fixed a navigation issue when a new message was posted. The forum portlet can now be customized through an XSL template (atForum2.xsl).	441	1001899
Enhancement	Display Context / Related links for Topics and Applications	460	1002117
Enhancement	Enabled IMAP access for default webmail account It is now possible to use IMAP as the mailbox protocol for the default webmail account.	459	1002017
Enhancement	External Community Invitations: it is now possible to create new external users as ReadOnly users by set Application Property ("Global", "ExtranetUserReadOnly")=1	459	1002085
Enhancement	Forum: it is now possible to customize the Forum Header (web/Custom/atForum/ForumHeader.htm), post-icon (web/Custom/atForum/edit.gif) and alternate PostGroup color (per AppProperty("Forum", "AlternatePostGroupColor") = "1").	460	1002109
Enhancement	HTML Topic portlet: it is now possible to not show edit tools also for Editors by setting the option "Show edit tools (yes/no)" in the Portlet Property Page.	455	1001998
Enhancement	It is now possible to send and receive encrypted mails by setting the "SendEncryptionType/ReceiveEncryptionTtype" in the Configurations or in the WebMail properties.	459	1002092
Enhancement	Last activities portlet: new event type "Message from user"	459	1002012
Enhancement	My Picture portlet: it is now possible in the Property Page to deactivate the status showing.	436	1001813
Enhancement	My Workflow Tasks portlet: it is now possible to sort the workflow tasks by any field (Type, State, Caption or DueDate).	446	1001931
Enhancement	New Hires portlet: new option in the portlet property page for the user sorting by date (ascending/descending).	437	1001825
Enhancement	New portlet: Tip Of The Day / Random Tip (Task based)	460	1002127
Enhancement	New Report Designer: now possible to use Query String parameters along with variables in the Report Definition (in the SQL statement the variables should be included in {}).	460	1001441
Enhancement	New Sort Options for Search Results Search results can now be sorted by title, rating and by specific Topic Properties. A Topic Property appears in the sort dropdown if it has been enabled as a default option for advanced search.	442	1001922
Enhancement	New Topic Property / Meta Data type: Multiselect/Context	460	1002118
Enhancement	News Portlet: it is now possible to export asynchron portlets in RSS format (ExpFile: /cache/RSS<TileId>.xml) by setting the name of the custom template created based on TopNewsTemplate.xml in the portlet property page (field: "Export XML-Template").	459	1002094

Enhancement	Org Chart PDF Export	437	1001746
Enhancement	Outlook Style: Configurable Navigation Panel Sections Added a configuration option for Application Layout (Outlook style). Navigation panel selectors can now initially appear collapsed, or sections can be disabled (only the category tree is displayed). The option is available under Administration - Configuration - Global Settings - Navigation Panel Mode.	455	1002016
Enhancement	Restrict User Sessions Added an option to allow only one session per user at a time. If the Application Property Login.RestrictSessions = 1, any previous sessions are terminated when a user logs in.	442	1001902
Enhancement	RoleMembers Portlet: it is now possible to filter role members by permissions (all/group managers only/group members only).	455	1002026
Enhancement	Search portlet: added "no filter" option to the field "Filter By Topic Property" in the Portlet Property Page.	455	1002054
Enhancement	Send to Friend: created a custom template which allows using Send to friend links with Outlook (custom\templates\sendtofriendOutlook.htm).	439	1001850
Enhancement	Session ID Security Improvements Added an option to generate a new session id when the user logs in. To enable this feature, create an Application Property Login.ResetSessionId = 1.	442	1001891
Enhancement	Social Voting: it is now possible to allow also ReadOnlyUsers to post new items (by enabling a new checkbox on the portlet property page).	439	1001875
Enhancement	Start New Workflow portlet: it is now possible to filter workflows by setting the property "Filter By Solution" in the portlet PropertyPage.	455	1002049
Enhancement	Support for System Parameters (such as %%sysDisplayName%) in Portlet Properties.	460	1002075
Enhancement	Tag Cloud portlet: new option "Show Topic Count" (yes/no).	446	1001886
Enhancement	Topic Details Page: added download link.	437	1001811
Enhancement	Top News: it is now possible to export asynchron portlets in RSS format.	459	1001214
Enhancement	WebMail: new TLS and SMTP-Authentication options to support Gmail.	459	1002110
Enhancement	Workflow Tasks: it is now possible to hide the "My Comment" field by set the new ApplicationProperty("Workflow", "dmTasksDetailsHideMyComment") = 1 .	455	1002043
Enhancement	Workflow: it is now possible to manage the return after the processing of tasks by set AppProperty ("Workflow", "TMReturnPage")=1.	439	1001845
Bug Fix	ActiveDirectory Synchronization Settings: preserving manual extension in the INI-file.	437	1001808
Bug Fix	App Builder Data Import: exclude computed fields from the import.	455	1002032
Bug Fix	AppBuilder: hiding the internal per user role in lookup fields on Roles (wlGroup) table.	459	1002076
Bug Fix	AppBuilder: made sure that the Record Permissions and target Application Permissions have been considered in "Add Attachments"-Menu.	459	1001959
Bug Fix	AppBuilder: the fields atCreateDate/atChangeDate are now saved and displayed correctly in based on the Time Zone of the current user.	459	1002081

Bug Fix	Application Builder: made sure that the DateFields are always displayed in user locale.	455	1002008
Bug Fix	Application MailTemplate: fixed the problem that the record was not saved without "Body HTML" entry.	455	1002025
Bug Fix	ApplicationBuilder: made sure that also ReadOnly field values (CheckBox, TriState, Rating) are always correctly saved.	455	1002066
Bug Fix	Awards portlet: fixed the sorting problem.	446	1001909
Bug Fix	BannerUpload portlet: It is now possible to remove an image.	460	1002131
Bug Fix	Calendar popup display issues: Fixed display problems with date picker popups.	447	1001925
Bug Fix	Calendar portlet: made sure that the month view displays all events correctly as "selected".	445	1001898
Bug Fix	Calendar: performance problem	449	1001916
Bug Fix	Category Manager: made sure that category title is set as sort string and icon is set from the parent category or user input (if not set in template) when creating a new category from template.	455	1002035
Bug Fix	Category Manager: made sure that the user has admin permissions on the selected Parent Category.	455	1001982
Bug Fix	Category Sort Order in Outlook Style and Tree Controls: Fixed the sort order of categories in Tree Controls.	459	1002000
Bug Fix	Configuration Wizard - Verify Connection Strings	439	1001847
Bug Fix	Configuration Wizard: Fixed the error "Type mismatch (Error 13) in atAdminTools.Scheduler.SchedulerSetAccount at line 11010".	459	1002023
Bug Fix	ContentMgr: made sure that Fixed and Global Topic Properties are saved by Web Folders Publishing.	439	1001840
Bug Fix	Counter Portlet Tuning: Performance Improvement for Counter Portlet.	437	1001821
Bug Fix	Create a Community: made sure that the new CommunityMemberRole name is really unique.	455	1002003
Bug Fix	Currency Converter Update: Updated the currency conversion portlet to work with the latest Oanda web site.	437	1001831
Bug Fix	Dashboards: fixed problems with the appearance of special characters	459	1002050
Bug Fix	Dashboards: fixed the problem that sometimes LED Dashboard value was reset to 0 a few seconds after loading.	459	1002069
Bug Fix	Data Import: made sure that all the fields containing Id in caption are handled correctly in the Data Mapping Step	446	1001923
Bug Fix	Extract text from Rich Text application fields: The text content of rich text fields is now extracted and available for the search engine.	458	1002078
Bug Fix	File download: fixed a problem with '#'-characters in the file names.	439	1001882
Bug Fix	Filespider: made sure that deleted categories do not appear in the parent drop down list.	459	1002113
Bug Fix	Filesystem Spider: made sure that the spider categories appear in portal after spidering and that the spider tag properties (if used) are shown as well.	439	1001866
Bug Fix	Fixed Content Links: Fixed an issue with Content Links in the web page editor. Under certain conditions, no categories were displayed.	459	1002105
Bug Fix	Fixed custom message files: Fixed an issue where custom messages were ignored when no standard message was defined.	459	1002080
Bug Fix	Fixed Windows 2008 R2 Setup Issues.	444	1001944
Bug Fix	Fixed "Find People": A problem was fixed which could cause the "Find People" option to fail when certain portlets were on a page.	447	1001962
Bug Fix	Fixed a rendering issue with custom Login template.	444	1001952

Bug Fix	Fixed category select: Fixed an issue where no checkboxes were available for top-level categories in tree control.	459	1002063
Bug Fix	Fixed date picker popup issues with different regional settings.	445	1001949
Bug Fix	Fixed Instant Messenger: Fixed issues with the Instant Messenger component which prevented messages from being delivered.	441	1001894
Bug Fix	Fixed missing dropdown icon: Some browsers did not display the dropdown icon next to com bobox controls. This was corrected.	441	1001906
Bug Fix	Fixed problems with search index lock files.	445	1001892
Bug Fix	Fixed search index issues: Fixed a problem where a lock file prevented further search index updates.	445	1001912
Bug Fix	Fixed view menu: Fixed a display issue with database views which had an apostrophe ('single quote') in their name.	442	1001935
Bug Fix	Fixed XSS on user/password lookup page. Fixed a cross-site-scripting vulnerability on the "Send password" page.	459	1002073
Bug Fix	FLV Streaming Fix: Fixed a compatibility problem with the Flash video streaming server.	439	1001858
Bug Fix	Hide times in Calendar View: For regular date-only fields, date spans are no longer displayed with a time in the Calendar View.	447	1001964
Bug Fix	Improved Thumbnail/PDF Extraction for Web Links.	459	1002090
Bug Fix	Improved performance when saving role memberships: Changed the logic of saving role memberships to scale better when a large number of roles exist.	439	1001861
Bug Fix	Instant Chat: Fixed a problem with special characters (like German Umlauts).	439	1001853
Bug Fix	Last Activities portlet: fixed the IE stretching problem by very long URLs.	459	1002074
Bug Fix	MetaWebLog API now uses adenin temp folder.	444	1001941
Bug Fix	MyCommunities portlet: Show also Global communities when AppProperty("MyCommunities", "ShowGlobalInProfiles")=1.	437	1001832
Bug Fix	MyProfile portlet: fixed the problem that data could not be saved if numeric fields had been shown on the profile	439	1001871
Bug Fix	MyWorkflows / MyWorkflowTasks portlets: made sure that the Date fields are shown in user format.	455	1001996
Bug Fix	Navigation Portlet Performance Improvements: Improved the internal logic to provide faster page load times.	441	1001913
Bug Fix	Navigation Portlet: Dropdowns appear off to the left.	439	1001856
Bug Fix	New Thumbnail Engine: The thumbnail generator has been modified to use a WPF-based library instead of the GDI+ API. This should improve memory issues which could cause thumbnail generation to fail after several passes.	438	1001865
Bug Fix	Page Manager: fixed the layout problems when adding a new portlet in the "right to left" mode.	444	1001883
Bug Fix	People Find dropdown: fixed the problem that the dropdown was shown behind the second level navigation bar.	435	1001806
Bug Fix	Personal Profile portlet: made sure that the portlet definitions will not be lost if an error appears.	446	1001897
Bug Fix	Picture Gallery - Improved Image Transitions. Upgraded jQuery component for picture gallery.	459	1002061
Bug Fix	Portlet Import: fixed the problem that no portlet categories were shown.	435	1001801
Bug Fix	Recycle Bin: Fixed an error when trying to delete entries. Adjusted the database cursor logic.	439	1001854
Bug Fix	Role Members Portlet: made the search for location more exact so that only the exact locations selected from the combo box are matched.	437	1001820
Bug Fix	RSS Viewer portlet: fixed the problem with relative links (without "http://") by	449	1001981

	adding the target server url (http:<servername>).		
Bug Fix	Search no longer returns disabled AD users. A bug was fixed which caused the search index to not be properly updated when a user was disabled in Active Directory. Disabled users are now marked as inactive and will no longer be displayed in search results. To get consistent behavior for users who were disabled in the past, you may need to rebuild the search index.	445	1001954
Bug Fix	Search: Fixed Category Filter. An issue in the search engine was fixed which could throw errors when a search query was filtered over a large set of categories.	459	1002064
Bug Fix	SRX72381: Web Page Editor loads slowly.	441	1001918
Bug Fix	SRX73607: Javascript Error in NavPane.js	459	1002044
Bug Fix	System E-Mail Templates: all templates can now be customized on the administration portal.	460	1002096
Bug Fix	Template fix for "Transparent" style. Fixed a problem with the HTML markup generated in the "Transparent" style.	439	1001857
Bug Fix	Thumbnailer: made sure that the temp. directory is correctly defined.	455	1002058
Bug Fix	Topic Download: made sure that the spidered topics can be downloaded without any errors (Bad Request, Not Found).	439	1001876
Bug Fix	Topic Edit properties: made sure that the keyword tags are not lost with changing to "Publishing Period" tab.	437	1001812
Bug Fix	Topic Details page: showing "Approval Pending" in field "State/Expiry" if the topic is not yet approved.	437	1001810
Bug Fix	Topic List portlet: made sure that the virtual InfoType is not overwritten when uploading a new version.	459	1002020
Bug Fix	Topic Properties: made sure that also ","-separated string tag values are correctly saved.	446	1001929
Bug Fix	Upgrade HTML Editor. Upgraded the external component used in the web page editor.	441	1001911
Bug Fix	User name change: made sure that the user profile category also refreshed in kmCategories when a user's name is changed.	455	1002060
Bug Fix	User synch fix for duplicate names. Fixed a bug in the user synchronization which could result in incomplete group membership folding if two users had the same name.	437	1001834
Bug Fix	Weather Portlet: Modified weather portlet to work with current wunderground web site.	459	1002072
Bug Fix	Web Folders workaround for Windows 2003 clients. Implemented a workaround to allow read-only Web Folders access for Windows 2003 WebDav clients. Windows 2003 clients are unable to open documents where the user has no write permission. The workaround makes documents initially appear to be writable. If the user tries to save a new version, this will silently fail if the user now has write permission.	437	1001835
Bug Fix	Web Folders: Parent category page template. Use page template when a new category is created via Web Folders.	459	1002021
Bug Fix	Web page editor improvements. Code optimizations to avoid "GDI+"-related errors.	459	1002093
Bug Fix	Web Capture: fixed problems with Firefox.	449	1001972

Bug Fix	Wiki portlet: fixed "wiki"-publishing problem.	446	1001939
Bug Fix	Wiki portlet: fixed performance problem for entries with a large number of versions	455	1002036
Bug Fix	Workaround for Microsoft ASP.NET Security Issue: http://www.microsoft.com/technet/security/advisory/2416728.aspx	448	1001977
Bug Fix	Workflow Designer: allowed entering more than 3 digits in the CId field (especially important for longer CIds created with the modeler)	459	1002055
Bug Fix	Workflow Engine: fixed the problem that the function func:today() was not resolved (which caused permanent execution of the appropriate Workflow Task and performance problems)	439	1001880
Bug Fix	Workflow Engine: made sure that the due date is correctly updated by "ActionVBScript"-action.	455	1002040
Bug Fix	Workflow Tasks: made sure that the Date fields are always displayed in user time zone.	459	1002070
