# 1 New HTML Editor

We've complete rewritten the integrated HTML Editor – now providing the most powerful web editing experience:

## New Features:

- True WYSIWYG – the editor now shows all fonts exactly as they will appear on the page
- Image Editor – allows users to resize, crop and rotate images directly in the browser
- Allows authors to embed Flash & Multimedia into the page
- Shared/public images
- New custom styles in content.css e.g. left or right adjusted boxes
- AJAX, in-context spell checking

## 2 Portlets

### 2.1 Graduated Topic List

This new portlet extends the existing rating system with a convenient user interface that makes it easy to promote or demote articles:

Popular Ideas [Post article](#)

---

**5 Points** **Easy RSS Feeds**  
 Add a Category setting to enable easy RSS feeds for each Category/Site  
**Tags:** RSS browser  
 Posted: 8/12/2008 by Amy Hawthorne 1 Comment ★★★★★

---

**4 Points** **Make change dates more verbose**  
 Replace dates (like Posted: 8/12/2008) with a text if the date is within the last 30 days e.g. Posted: 12 minutes ago or 2 days ago.  
**Tags:** dates  
 Posted: 8/12/2008 by Extranet Administrator 1 Comment ★★★★★☆

---

**0 Points** **Add "The Wall" to profile pages**  
 Create a profile page portlet similar to Facebook: "The Wall".  
**Tags:** profiles the wall facebook  
 Posted: 8/12/2008 by Martin Amm 0 Comments ☆☆☆☆☆

---

**0 Points** **Calendar Event Signup**  
 Allow Events added to the Calendar to be marked as allowing/requiring signup, optionally set a limit on attendees, then allow users to sign up from the Calendar  
**Tags:** calendar idea  
 Posted: 8/12/2008 by Amy Hawthorne 0 Comments ☆☆☆☆☆

This portlet makes it very easy to build interactive "suggestion boxes" to gather feedback and manage the ideas from employees.

This portlet helps tremendously to engage users and to build truly interactive communities.

Get a first impression of this portlet at the new [Ideas@adenin](#) site.

## 2.2 Topic Gallery Portlet

The new Topic Gallery Portlet is based on the regular Topic List Portlet but allows you to show the topics in multiple column layouts:

The screenshot displays the Topic Gallery Portlet interface. On the left, an 'Image Gallery' section features a grid of 16 image thumbnails, each with a title: Ascent, Autumn, Azul, Bliss, Blue hills, Crystal, dellwall1, dellwall2, dellwall3, Follow, Friend, Home, img1, img10, img11, and img2. Navigation controls are visible above the grid. On the right, a 'Form Gallery' section lists several documents with their titles, dates, and brief descriptions:

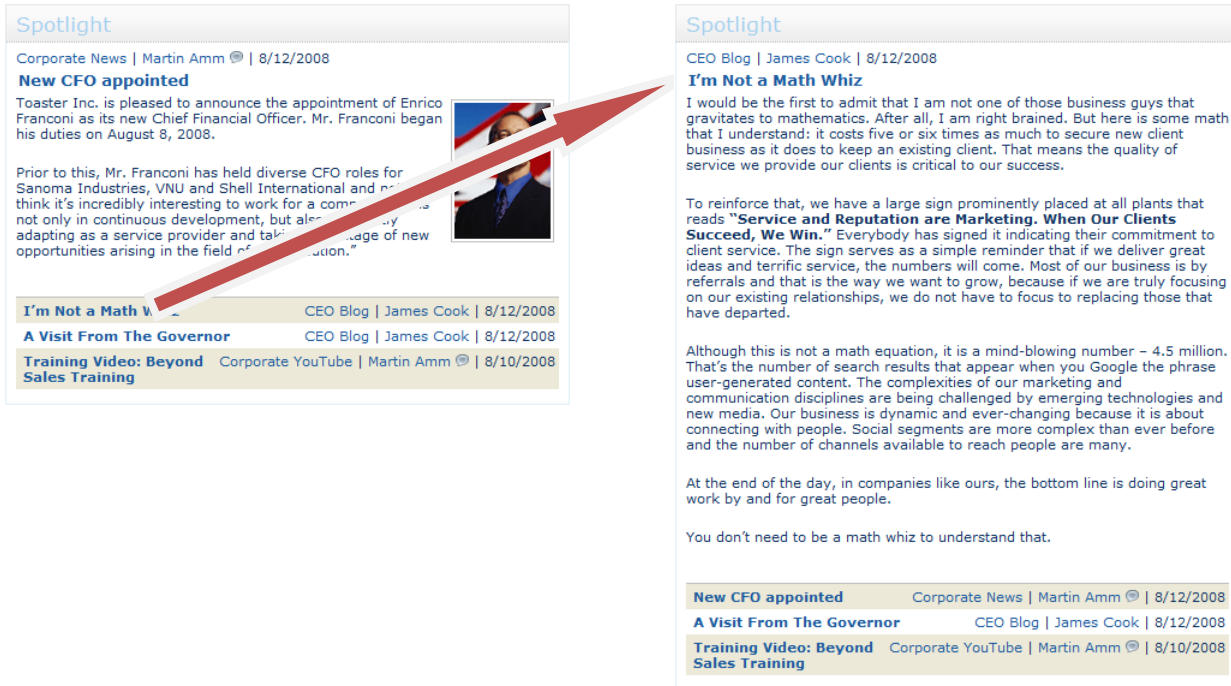

- Performance Checklist** (8/10/2008): An example of a checklist.
- Performance Interview Planning Checklist** (6/4/2008): The Performance Interview Planning Checklist template provides a list of questions for an employee performance interview.
- Employee Emergency Information Form** (5/13/2008): Detailed Information about the...
- Safety Policy Violation Report** (5/8/2008): Review this report with the employee who violated safety policy...
- Accident or Illness Investigation Report** (10/5/2006): Human resources assistants can use this template to create a form for documenting investigations of workplace accidents or illnesses.
- Manager Feedback Form** (11/17/2004): Feedback about management provides important information that may impact business decisions within many organizations.

This new portlet is especially well suited for creating Image Galleries for anything from Marketing Collateral to Corporate Event snapshots. The New Auto Thumbnail Option (see 3.4) makes it easy to quickly populate Image Galleries by just dragging and dropping existing image files into the web folder of the category.

File and video Topics can also benefit from the new Gallery Portlet, giving users quick access to more documents per page, with the added benefit of visual recognition.

## 2.3 News Panel Portlet

This new News Panel Portlet allows to you to display News items in a compact and interactive format: the first topic is shown as full text and for the remaining articles are shown as just the captions. Users can click to expand these captions and see the full text of other News Topics:

Using this new portlet, you can ensure that important messages don't get lost in the shuffle of new announcements. The Caption format also gives users more context on each story (author, source, post date), so they are more likely to click through and read more.

## 2.4 Wiki Portlet Update

The Wiki Portlet has been redesigned to make publishing and navigation easier. A new index mode allows users to browse all topics of wiki by title or date, jump directly to any article and easily navigate back to the Wiki Home Page. Users will still be able to use wikiword links to navigate through related articles as intended by the article authors.

## 2.5 Shortcuts Portlet Update

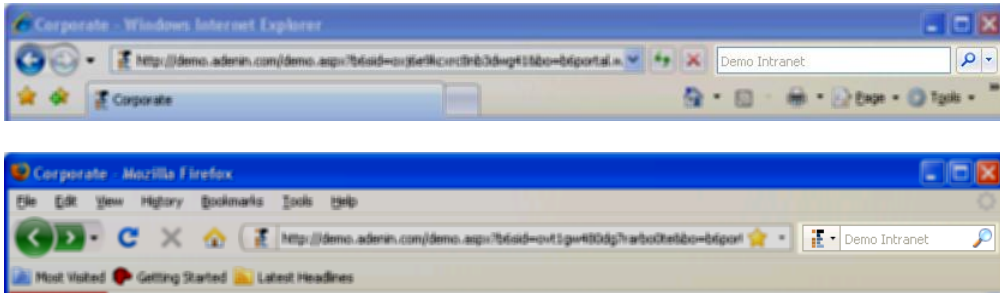

The Shortcuts portlet now allows you to show the personalized navigation shortcuts as a drop down list, saving valuable screen space:

### 3 Miscellaneous

#### 3.1 OpenSearch

OpenSearch allows users to access a search engine directly from the web browser search toolbar. adenin Search now supports OpenSearch (please see <http://www.opensearch.org/Home> for details):

#### 3.2 HTML Version Compare

This new feature allows you to view the differences between two version of any HTML topics (like wikis, blogs):

History (10)						Compare Versions	
Action	File Name	size	User	Date	Version	Compare	Comment
Checked in	c0001021558.htm	1 KB	Administrator	8/12/2008	9	<input type="radio"/>	

Toaster Inc. is pleased to announce the appointment of Enrico Franconi as its new Chief Financial Officer. Mr. Franconi began his duties on August 8, 2008.

Prior to this, Mr. Franconi has held diverse CFO roles for Sanoma Industries, VNU and Shell International and notes, "I think it's incredibly interesting to work for a company that is not only in continuous development, but also constantly adapting as a service provider and taking advantage of new opportunities arising in the field of e-distribution."

After studying business economics and information management at the University of Groningen in the Netherlands, Mr. de Franconi began his career in 1979 at Shell International where he served in various financial management positions for Shell Chemicals, the Nederlandse Aardolie Maatschappij (NAM) and Brunei Shell. Between 1990 and 1999, Mr. Franconi was the finance manager for Shell's Exploration and Production Ventures in Burma, Russia, Kazakhstan and Peru. In 1999, he moved to the Dutch industry conglomerate, VNU, where he was closely involved in the respective sales of VNU's magazines to Wegener NV and newspaper divisions to Sanoma, the Finnish electronics concern.

#### 3.3 Universal Edit Button (Firefox)

The Universal Edit Button is a Firefox extension showing a green pencil icon  in the address bar that indicates that the web page includes editable content (such as Wikis). Clicking on the icon takes you directly to the new HTML editor for the current page. Please see [http://universaleditbutton.org/Universal\\_Edit\\_Button](http://universaleditbutton.org/Universal_Edit_Button) for more information or to download the Firefox extension.

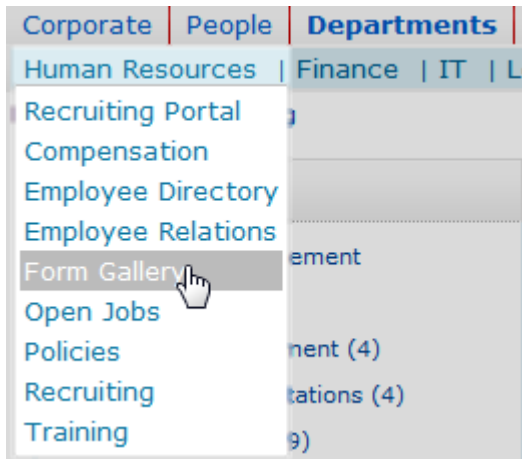

### 3.4 Auto Thumbnails Option

A new global configuration option allows you to enable automatic thumbnail generation for either just image files or all supported file types. A new category-level property allows you to override the global thumbnail generation setting for a specific category.

Web Folders also respect the Auto Thumbnail setting so you can now get thumbnails for files published through the Web Folder interface. This is especially useful for the new Gallery Portlet (see 2.2) allowing users to now to publish existing images by just dropping them to the web folder.

### 3.5 Drop Down Menus (3<sup>rd</sup> Level)

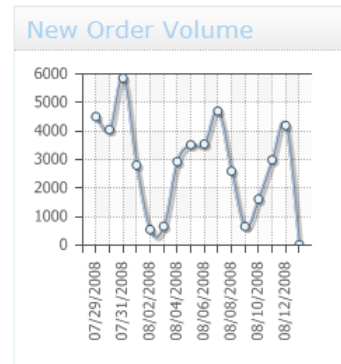

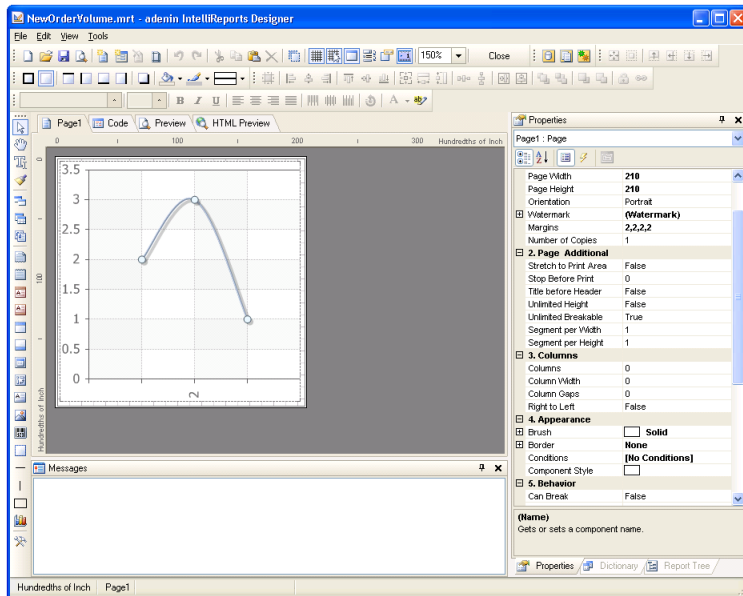

It is now possible to show the 3<sup>rd</sup> level categories as a drop down list:

## 4 IntelliData – New Reports & Charts Module (Beta)

Version 9.7 includes a beta version of the new IntelliData. The IntelliData engine simplifies embedding business data from various databases into the portal. Structured information residing in isolated data silos in SQL Server, Oracle, DB2, MySQL and ODBC databases can be combined and securely visualized in business charts or web pages, and exported to Excel and PDF files.

IntelliData includes a powerful Integration Designer which allows you to build SQL queries, merge data from different databases into a single chart or report, and to design reports and charts.

Customers who want to unlock the value of their business data and have current data integration or visualization projects can join the official beta program and receive free training. Please contact your account manager or [sales@adenin.com](mailto:sales@adenin.com) for details about the beta program.

## 5 Complete Change Log

Type	Build	Changeld	Change
New Feature	374	1001201	Automatic Thumbnails  New options to create thumbnails automatically.
